*Una valida proposta per gli automobilisti più esigenti, all'insegna della sicurezza, della tenuta di strada e delle prestazioni sportive.*

*Con le linee KSM, KTA, KGA e THR, OSRAV fornisce al mercato soluzioni innovative e personalizzate, studiate per l'utilizzo stradale e l'agonismo.*

*OSRAV realizza una gamma completa di ammortizzatori, oltre ad assetti sportivi per vetture di serie con molle ribassate.*

*A convincing proposal for the most demanding drivers looking for safety, good road-holding and a sporty performance. With the KSM, KTA, KGA e THR, OSRAV provides the market with innovative, customised solutions designed for ordinary road use and for racing. OSRAV makes a complete range of shock absorbers as well as providing a sporting ride control and set-up for standard vehicles with lowered springs.*

*Per il mondo delle elaborazioni sportive consultare il catalogo specifico. See the specific catalogue for the sporty set-ups.*

# KIT MOLLE SPORT SPRINGS

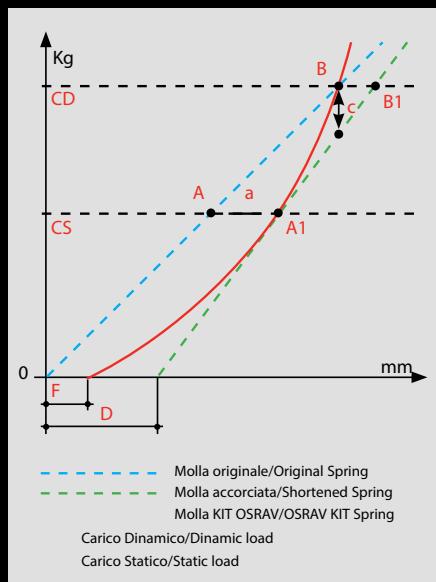

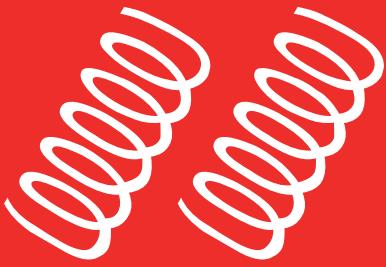

Diagramma Molle Kit Sport / Sport Spring Kit Diagram

*OSRAV opera nel settore auto da più di vent'anni, ed è particolarmente specializzata nel campo delle sospensioni, nel quale vanta oltre una pluriennale esperienza, acquisita con la continua presenza nel mondo delle corse, che l'ha portata ad arricchire continuamente il suo bagaglio tecnico per poter rispondere alle richieste sempre più qualificate del mercato.*

*Le esigenze del moderno automobilista, unite alla predisposizione delle vetture di serie ad una linea sportiva, hanno indotto OSRAV a studiare un nuovo tipo di sospensione, tale da soddisfare queste nuove richieste. E dopo approfondite ricerche e numerosi collaudi, eseguiti anche su vetture da competizione, OSRAV ha messo a punto un nuovo KIT SPORTIVO, composto da una serie di molle elicoidali per sospensione, che permette di ottenere l'abbassamento di assetto dell'auto e dare così al veicolo un look sportivo originale e aggressivo.*

*I vantaggi del KIT SPORTIVO OSRAV sono messi in evidenza nel diagramma di comportamento delle molle illustrato accanto, nel quale si possono notare le differenti reazioni delle molle sportive (linea continua rossa), messe a confronto con quelle delle molle originarie (linea tratteggiata blu), che indicano l'assetto iniziale del veicolo. Come si può facilmente notare nel diagramma, il vecchio sistema di abbassamento, che prevedeva il taglio delle molle (linea tratteggiata verde), consentiva di ottenere l'abbassamento desiderato (a), ma comprometteva, oltre alla resistenza del materiale, anche la lunghezza della molla (D) e la perdita di carico dinamico (c), in condizioni normali di assetto. Invece il KIT SPORTIVO OSRAV consente di ottenere lo stesso abbassamento (a) senza nessuna perdita di carico (B=B1) e con un'irrilevante accorciatura della molla (F).*

*OSRAV has been working in the automobile sector for more than twenty years and it has been specialised especially in the field of suspensions, acquiring invaluable experience through its continual presence at races. This has enabled*

*the company to enrich continuously its know-how in order to satisfy the increasingly demanding market. The requirements of a modern driver plus the tendency of standard production cars towards a sporty line have induced OSRAV to study a new type of suspension designed to meet these new demands. In-depth research and countless tests, also on racing cars, have resulted in a new SPORTING KIT.*

*KIT, consisting of a set of helical suspension springs, allowing the car suspension level to be lowered and giving the vehicle an original, assertive sporty look.*

*The advantages of the OSRAV SPORTING KIT are highlighted in the behaviour chart of the springs to the side, showing the different reactions of the sporting springs (curved red line) compared to the original springs (blue dotted line - which also indicates the initial vehicle set-up).*

*It is easy to see from the chart that the old lowering system, which provided for cutting the springs (green dotted line), lowered the vehicle by the required amount (a) but jeopardised not only the strength of the material but also the length of the spring (D) and the dynamic load loss (c) under normal ground clearance conditions. The OSRAV SPORTING KIT instead permits the same lowering (a) to be obtained without any load loss (B=B1) and with a negligible shortening of the spring (F).*

# KSM

**VITAL**  
SUSPENSIONS *by OSRAV*

Corretto sistema di misurazione dell'assetto, PRIMA e DOPO l'intervento / Correct system of measuring the suspension levelling, BEFORE and AFTER

Test di carico / Charge test

Inoltre, mentre la molla originale e la molla accorciata hanno un carico costante, il KIT SPORTIVO OSRAV si comporta invece in maniera progressiva. Tutto ciò è reso possibile dal fatto che il KIT SPORTIVO OSRAV è ottenuto realizzando una opportuna relazione fra le tre variabili che determinano la portata della molla:

il diametro del filo, la lunghezza e il passo fra le spire. Solo però utilizzando degli acciai speciali legati al cromo-silicio, detti ad alta resistenza, avvolti a freddo ed opportunamente trattati e lavorati, è possibile arrivare a questi risultati.

Il KIT SPORTIVO OSRAV presenta inoltre un altro grosso vantaggio: permette di ottenere l'abbassamento desiderato, senza dover necessariamente sostituire gli ammortizzatori originali, quando sono ancora efficienti e tarati. Il risultato è un abbassamento del baricentro dell'auto, variabile a seconda del modello, da 20 a 40 mm. Questo risultato, oltre a dare all'auto un look più grintoso, assicura, se gli ammortizzatori sono efficienti, una maggiore sicurezza di guida: la migliorata tenuta di strada e la sensibile riduzione dei movimenti di rollio e beccheggio consentono infatti un più agevole controllo del mezzo.

**ATTENZIONE:** Una volta ottenuto il nuovo assetto è indispensabile far eseguire una verifica di camber e di convergenza delle ruote. Inoltre, qualora il veicolo sia dotato di regolatore di frenata, bisognerà verificare la corretta frenatura e, se necessario, intervenire con una nuova registrazione.

SIA L'APPLICAZIONE CHE I COLLAUDI E LE VERIFICHE DEVONO ESSERE ESEGUITI DA PERSONALE ADDESTRATO E QUALIFICATO IN QUESTO TIPO DI LAVORO, DATO CHE SI INTERVIENE SUL SISTEMA DI SICUREZZA DEL VEICOLO.

Furthermore, whilst the original and the shortened spring have a constant load, the OSRAV SPORTING KIT acts in a progressive way. This is because in the OSRAV SPORTING KIT the three variables which decide the capacity of the spring, i.e. the wire diameter, the length and the pitch of the turns, are suitably correlated. This result is only possible, however, using suitably treated and machined special cold-wound chrome-silicon alloy steels, called high-tensile steels. The OSRAV SPORTING KIT also offers another great advantage: lowering as required without necessarily having to replace the original shock absorbers, when they are still efficient and calibrated.

The centre of gravity of the vehicle is consequently lowered as much as 20 to 40 cm, depending on the model. This gives the vehicle a more assertive look and, provided the shock absorbers are efficient, guarantees greater driving safety. Better road holding and a considerable decrease in roll and pitching make easier the control of the vehicle.

**ATTENTION:** Upon completion of the new levelling, it is indispensable to check the camber and toe-in of the wheels. If the vehicle is fitted with a braking-force regulator, it must be checked that the latter is working correctly and if necessary re-adjust. APPLICATION AS WELL AS THE TESTS AND CHECKS MUST BE CARRIED OUT BY PERSONNEL WHO ARE FULLY TRAINED AND QUALIFIED FOR THIS TYPE OF WORK, SINCE IT INVOLVES THE SAFETY SYSTEM OF THE VEHICLE.

# AMMORTIZZATORI TARATI E ACCORCIATI

## CALIBRATED SHORTENED SHOCK ABSORBERS

Il Kit ammortizzatori O.S.R.A.V. KTA (tarati e accorciati) è la versione base e più richiesta per un assetto sportivo stradale non agonistico.

Infatti, le sue caratteristiche principali nascono da un'esigenza dell'utente che pretende le migliori prestazioni di taratura dei propri ammortizzatori quando utilizza un Kit di molle sportive ribassate.

Essendo in questo caso il baricentro del veicolo ribassato mediamente di tre centimetri rispetto all'assetto originale, anche gli ammortizzatori vanno corretti a questa nuova altezza. Pertanto, sono forniti anch'essi mediamente accorciati in modo da ripristinare le condizioni di lavoro ideali dell'ammortizzatore con il nuovo assetto, evitando quindi strappi e tamponamenti causati dalla differente altezza del veicolo e che è una delle maggiori cause di danneggiamento in questo impiego, oltre allo sfondamento della valvola di fondo, e superiormente lo "scoppio" del paraolio di tenuta.

A tale caratteristica fondamentale, si unisce una maggiore frenatura o taratura (mediamente maggiorata del 50% rispetto all'originale) in rimbalzo dell'ammortizzatore necessaria per smorzare la maggiore rigidità progressiva della molla di assetto soprattutto quando in corsa questa viene maggiormente sollecitata.

Il risultato che ne deriva dall'impiego del KTA OSRAV è una ottimale stabilità del veicolo, una maggiore sicurezza del mezzo, e delle prestazioni tipicamente sportive che si richiedono ad un veicolo per uso stradale. Inoltre la pressurizzazione del gas con cui vengono caricati gli ammortizzatori

ne migliora il confort di guida e soprattutto la durata evitando in tal modo il surriscaldamento dell'olio.

The O.S.R.A.V. KTA shock absorbers kit (calibrated and shortened shock absorbers) is the basic and the most required version to drive a vehicle not in competitive sports.

In fact, its main features born from a customer needs, customer who asks for the best performance in calibration of their shock absorbers when they are using a lowering sport springs

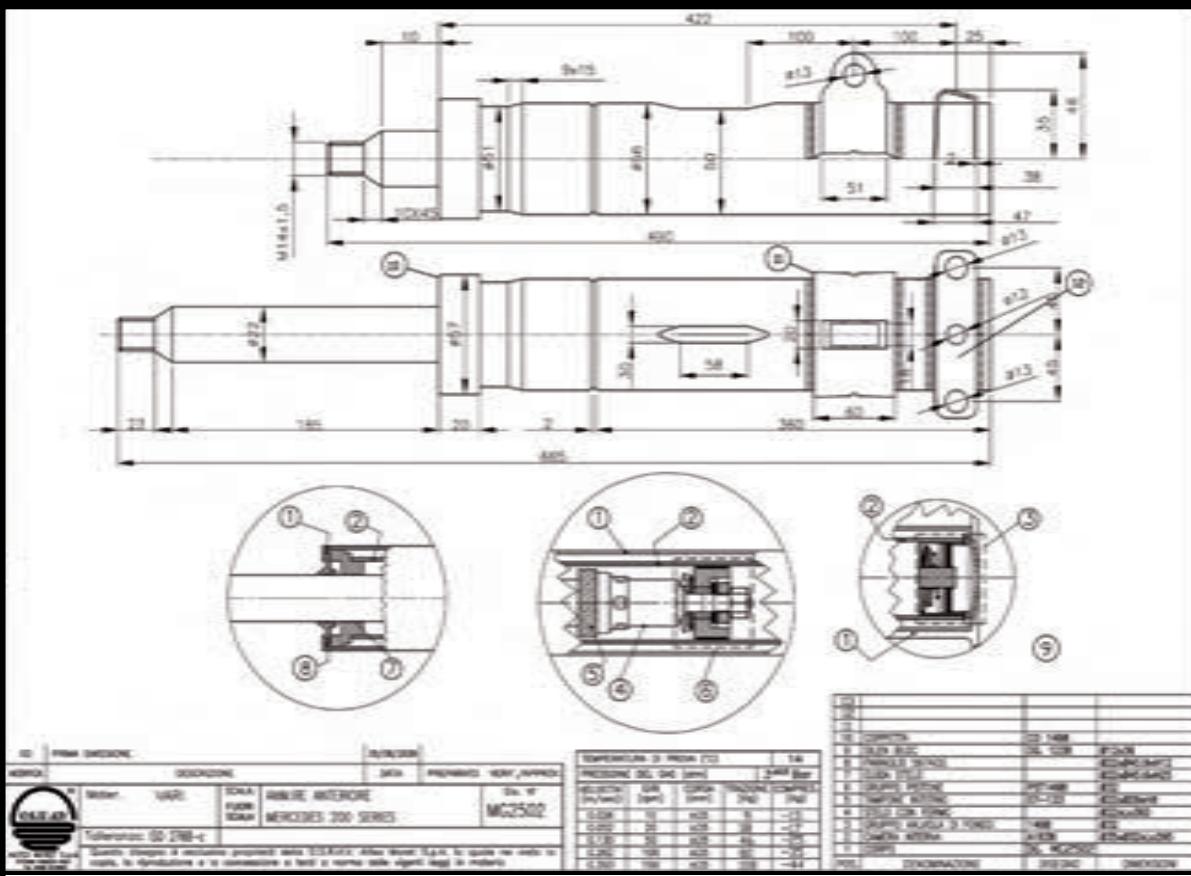

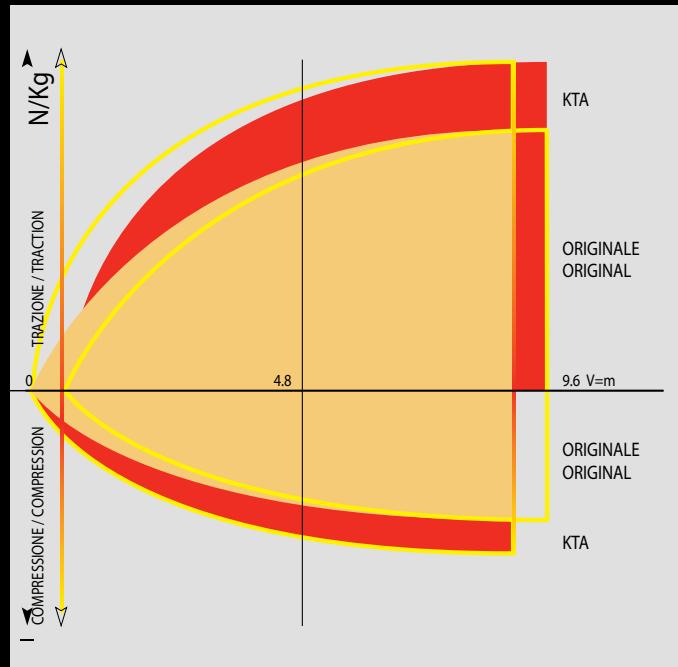

kit. Because in this case the centre of gravity of the vehicle is lowered of about three centimetres compared to the original set up, even the shock absorbers must be corrected to this new height.

Therefore, they are also provided shortened so as to reinstate the ideal working conditions of shock absorbers with the new structure, avoiding in this way crushes and tears caused by the different height of the vehicle, one of the major cause of damage in this duty, and the breaking of the bottom valve, and the "burst" of the oil seal. Joining this important features, the working and the calibration (increased of approximate 50% compared to the original) during the rebound of the shock absorbers is necessary to mitigate the progressive rigidity of the sportive spring especially when is more stressed.

The situation resulting using the KTA OSRAV is an optimum vehicle stability, a greater security, and a typically sportive performance required for a vehicle for road use. In addition, the pressurization of the gas which is charged in the shock absorbers improves the comfort of driving and the duration, avoiding in this way the oil overheating.

# KTA

The logo for VITAL SUSPENSIONS. It features the word "VITAL" in large, bold, red letters, with "SUSPENSIONS" in a smaller, black, sans-serif font below it. The letter "I" in "VITAL" has a small "by OSRAM" signature written through its center. To the left and right of the "VITAL" text are white circular icons containing a stylized speaker or microphone symbol.

# AMMORTIZZATORI REGOLABILI

## ADJUSTABLE SHOCK ABSORBERS

Il Kit di ammortizzatori Osrv KGA - KIT GAR è l'evoluzione più sofisticata della versione KTA. La linea KGA è indirizzata ad un pubblico più esigente, soprattutto nel settore corse, dove i tempi di intervento sul veicolo sono limitati e dove l'esigenza di variare la taratura in rimbalzo - a seconda che si passi dallo stradale allo sterrato - diventa molto sentita oltre a essere un reale vantaggio nella competizione. Ogni richiesta di assetto personalizzato può trovare risposta nel programma OSRAV KGA conformemente allo stile di guida di ognuno di noi.

Il programma sportivo ammortizzatori KGA si basa principalmente sul sistema di regolazione della trazione dall'esterno SENZA SMONTARE L'AMMORTIZZATORE DAL VEICOLO, intervenendo sull'ammortizzatore con una chiave a brugola se la testa dell'albero è a perno oppure con un'apposita chiave se la testa dell'albero è a occhiello.

Il sistema permette inoltre di ottenere tarature molto elevate, fino a tre volte superiori a quelle iniziali, con la possibilità di ripristinare i valori una volta terminata la necessità. Questa versatilità consente al KGA di essere applicato su di una vastissima gamma di modelli, risolvendo situazioni altrimenti impossibili.

Gli ammortizzatori KGA si distinguono anche per un'altra prerogativa fondamentale per il cliente, che è quella di poterli facilmente riparare una volta persa la loro efficienza, essendo prodotti smontabili. Infine la possibilità di regolare anche gli ammortizzatori tubolari, nonostante le ridotte dimensioni degli alberi, ha risolto non pochi problemi ai preparatori più esigenti

The Osrv KGA - KIT GAR kit is the latest development of the KTA version. The KGA line is oriented towards a more demanding consumer, especially in the racing sphere, where times

for working on a vehicle are limited and the need to alter the rebound or bump calibration - depending on whether there is a passage from made to unmade road - becomes essential apart from being a real advantage in the race.

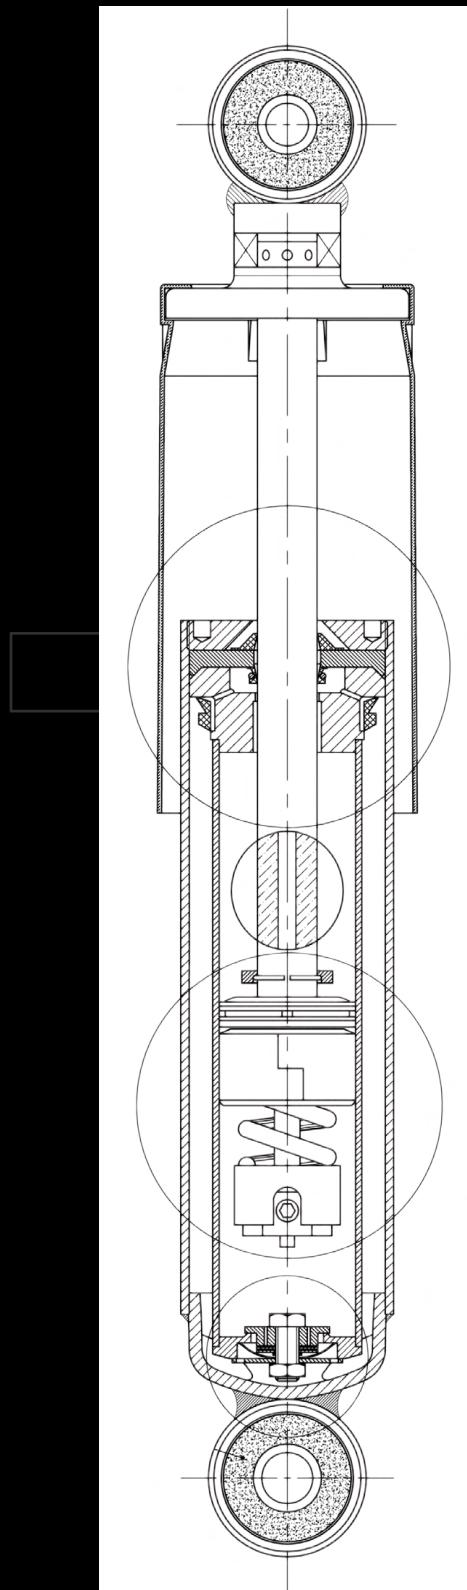

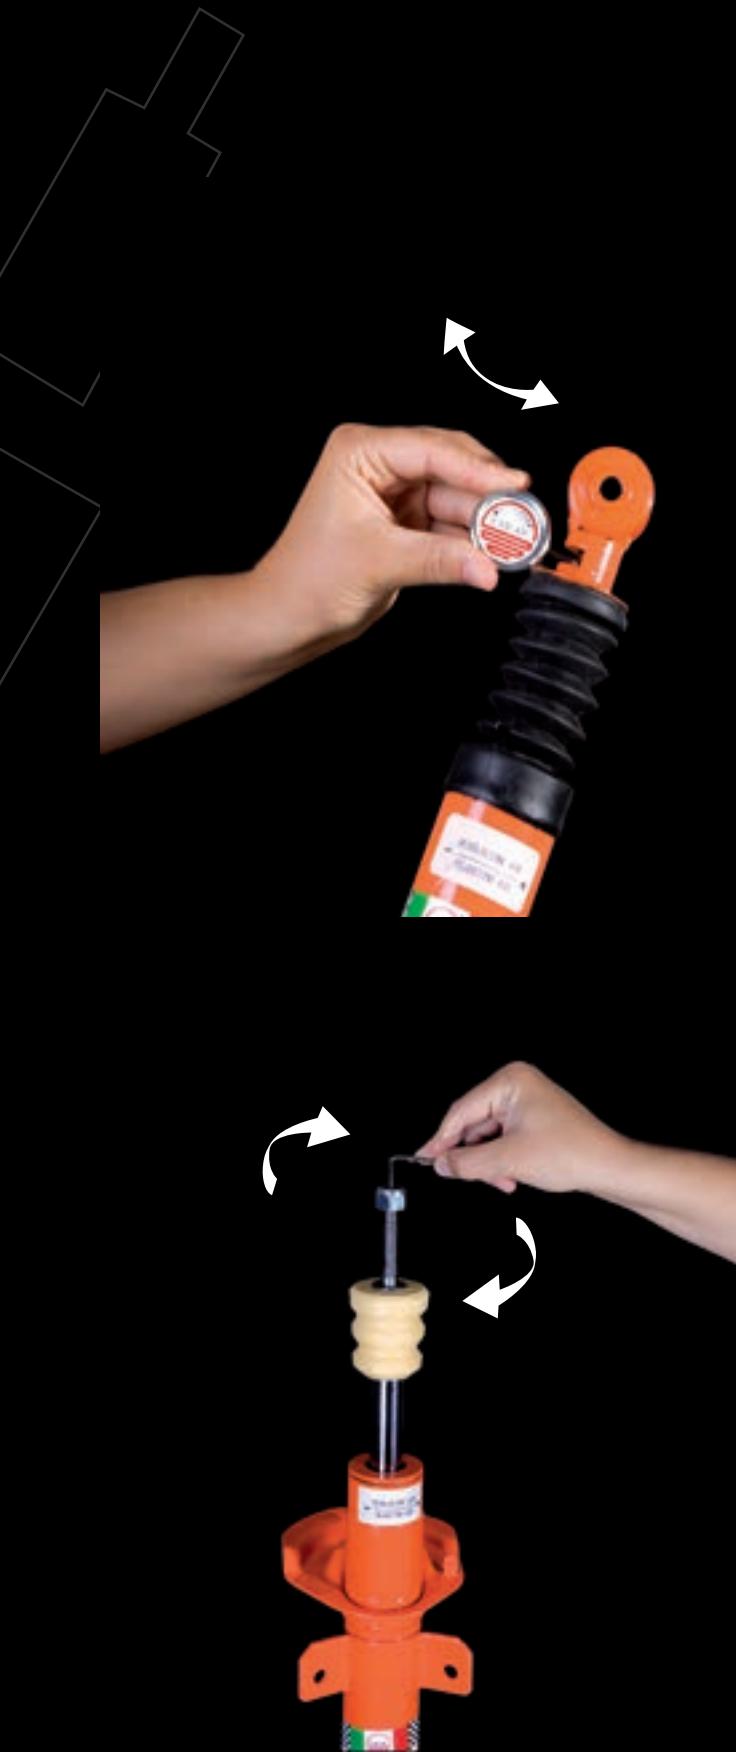

Every request for a personalised set-up and ride control finds an answer in the OSRAV KGA range, designed to satisfy every individual style of driving.

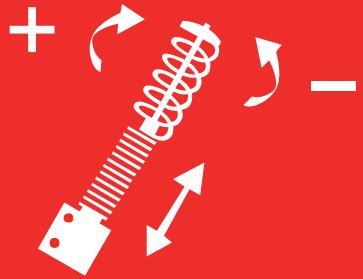

The basic feature of the KGA shock absorber sport range is the system for adjusting the drive externally WITHOUT HAVING TO REMOVE THE SHOCK ABSORBER FROM THE VEHICLE. The shock absorber can be adjusted with an Allen wrench on a pin shaft head or with a special wrench on an Elliot type shaft head. The system also allows up to three times the initial calibration to be achieved, with the possibility of resetting the original values. This versatility means that the KGA can be applied to a vast range of models, resolving otherwise impossible situations.

KGA shock absorbers also stand apart for another reason that is essential for customers: being able to repair them easily once they have lost their efficiency, because they are products that can be removed. Lastly, the fact that also tubular shock absorbers can be adjusted, despite the reduced dimensions of the shafts, resolves quite a few problems for the most demanding mechanics.

# KGA

SUSPENSIONS *by OSRAV*

# AMMORTIZZATORI FILETTATI

## THREADED SHOCK ABSORBERS

E' la versione brevettata e più avanzata della tecnologia O.S.R.A.V.

Questi KIT di ammortizzatori OSRAV sono costruiti principalmente per i veicoli da gara, in quanto le loro prestazioni soddisfano i piloti più esigenti.

La robustezza della carcassa, la finitura zincata ad alta resistenza le molle in acciaio pretemperato al cromo silicio, la molla di precarica, la valvola di ricarica del gas, ed il sistema di regolazione di KGA (cioè attraverso la rotazione manuale dell'asta all'interno dell'asse cromato permette di comprimere a piacimento la molla di taratura) che permette di ottenere quindi una taratura personalizzata al proprio utilizzo ed allo stile di guida, unita all'olio/gas ad alto indice di viscosità per le competizioni.

Inoltre la filettatura della carcassa permette la corretta regolazione dell'altezza del veicolo.

Sono queste le maggiori caratteristiche della linea di ammortizzatori sportivi THR. Dato il loro impiego tipicamente agonistico, abbiamo studiato la possibilità di poter ricondizionare

gli ammortizzatori dopo la gara o quando è ritenuto necessario, potendo ispezionare rapidamente l'interno dell'ammortizzatore grazie ad un tappo di chiusura filettato, che permette l'apertura dell'ammortizzatore ogni qual volta sarà necessario. Questo fa

si che il THR OSRAV se non ha subito incidenti possa essere rimesso a nuovo fino alla durata del veicolo, senza dover di nuovo riacquistare un kit completo ogni qual volta si esauriscono le prestazioni, ma solo riparandolo. Queste caratteristiche fanno del THR OSRAV il punto di riferimento per ogni pilota esigente che pretende per il suo veicolo il meglio delle prestazioni, della qualità e della sicurezza.

The THR is a patented kit sport version and the most advanced OSRAV technology.

These KIT of OSRAV shock absorbers are primarily built for vehicles for race, as their performance meet pilots requirements.

The strength of the casing, the galvanized finishing at high resistance, the pre-temperate chrome silicon steel springs, the preloaded spring, the valve for charging the gas and the adjustment system of KGA (through the manual rotation of the rod inside the chromed axis that can compress the spring as per customer needs) permit to obtain a personalized calibration for customer utilization

and driving style, joined with oil/gas at high viscosity index for competition.

In addition, the thread of the casing permit the correct regulation to adjust the height of the vehicle.

These are the major characteristics of this line of THR sportive shock absorbers.

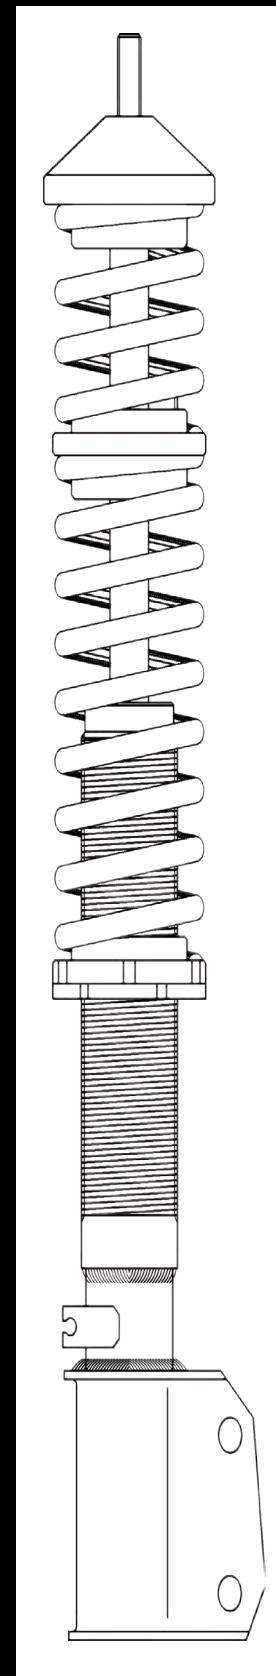

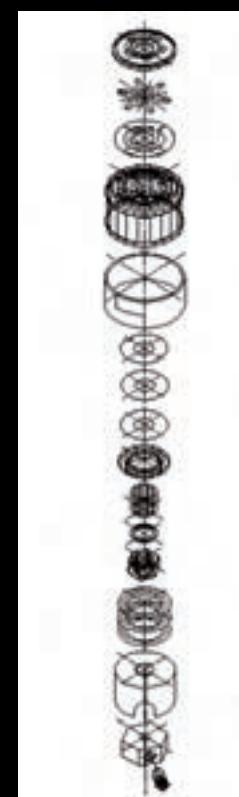

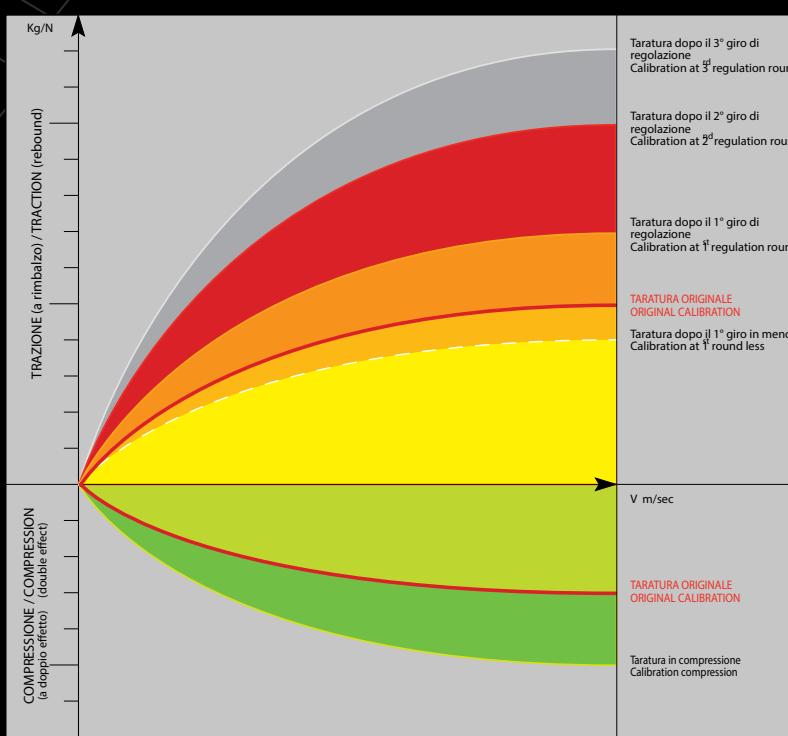

Because their use typically competitive, we studied the possibility of reconditioning the shock absorbers after the race or when it is considerate necessary buy the customer, he can

be quickly inspect the inside of the shock absorbers thanks to a screw thread cap closure, which permit the shock absorbers opening whenever is necessary. This makes OSRAV THR Kit, unless it has suffered accidents, to be adjusted until the duration of the vehicle without having to buy a new full kit at any time performances are down.

These characteristics do OSRAV THR Kit the point of reference for each pilot who needs for his vehicle the best performance, quality and safety.

## KIT REGOLAZIONE ANGOLO DI CAMPANATURA    KIT CAMBER REGULATION

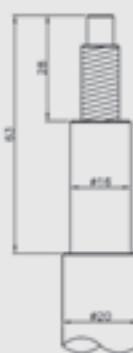

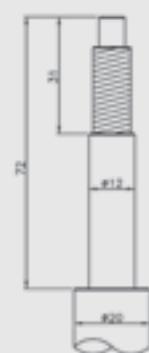

Bullone per la regolazione della campanatura, consigliato per modificare le geometrie esistenti o per il ripristino degli angoli originali.  
 Bolts for the regulation on the camber, suggested to modify the current geometrics or the restore of the original angles.

- Riduce l'usura dei pneumatici  
Reduce the wear and tear on tyres
- Migliora il comfort del veicolo  
Improve the confort of the vehicle
- Aumenta la tenuta di strada  
Improve the road - holding

Nel caso di giustificato reclamo riscontrato presso il ns. stabilimento, la ns. società garantisce la sostituzione gratuita del materiale fornito, riconosciuto difettoso, che copre esclusivamente il difetto dovuto alle materie prime impiegate e alle fasi di produzione.

Non saranno invece riconosciuti in garanzia danni conseguenti a:

- Applicazioni non previste nel ns. catalogo corrente
- Montaggio eseguito con attrezzi non idonei
- Errati montaggi e applicazioni di tutta la componentistica
- Non rispetto delle avvertenze informative esposte sopra
- Manomissione o rottura della valvola di ricarica del gas
- Utilizzo di altri gas oltre all'Azoto ed al Freon consentiti
- Regolazione scombinata delle tarature sia in trazione che in compressione
- Utilizzo del presente Kit in qualsiasi forma di competizione, se non espressamente da noi indicato
- Alberi rovinati da prese con la pinza o da ammaccature accidentali
- Utilizzo di pressione del gas oltre i limiti consentiti (vedere tabella corredata)
- Manomissione del tappo di chiusura dell'ammortizzatore se non da noi autorizzato
- Inoltre le contestazioni di difetto sul prodotto dovranno essere presentate esclusivamente al rivenditore autorizzato, franco spese di trasporto ed imballo, con allegato il tagliando di garanzia completo in ogni sua parte
- Il non rispetto di una o più clausole sopra elencate fa decadere automaticamente il diritto di garanzia
- In nessun caso verranno riconosciuti addebiti imputati alla ns. società oltre a quelli elencati

Per evitare qualsiasi problema di garanzia è opportuno affidarsi a personale qualificato ed attrezzato oltre che da noi informato, inoltre uno staff di tecnici competenti è sempre a disposizione telefonicamente presso la ns. sede per tutti i ragguagli e le informazioni più dettagliate e per un migliore servizio post-vendita.

Verranno prese in considerazione solo quei Kit accompagnati dalla garanzia (COMPILATÀ IN OGNI SUA PARTE) che si trova in ogni confezione all'atto di vendita. E QUALORA VENGA RISCONTRATO UN DIFETTO DI LAVORAZIONE O DI MATERIALE, VERRÀ PRONTAMENTE SOSTITUITO IL PEZZO RISCONTRATO DIFFETTOSO.

In case of justified complaints that have been acknowledged in our works, we guarantee the replacement free of charge of the components supplied that have been acknowledged as faulty for defect due to the raw materials employed and workmanship.

No warranty will be provided for damages caused by:

- Applications not described in this catalogue
- Installation performed with inappropriate equipment
- Wrong mounting and application of all components
- Non-conformity with warnings provided above
- Tampering or breaking of gas recharging valve
- Use of other gases besides those admitted, i.e. Nitrogen and Freon
- Inappropriate adjustment of both bump and rebound settings
- Use of this kit in any competition form, if not clearly stated by us
- Stems damaged by pincers or accidental denting
- Use of gas pressure beyond designed limits (see enclosed table)
- Tampering of shock absorber closing cap if not authorised
- In addition, claims concerning product defects should be addressed only to the authorised dealer without charging transport and packaging costs, enclosing the guarantee coupon appropriately filled in
- Non-compliance with one or more of the above-mentioned clauses will cancel any warranty rights
- No extra costs charged to our company besides those listed will be acknowledged in any case.

In case of any warranty problems, it is advisable to apply to qualified and appropriately equipped technicians who have also been informed by us. Our own expert technicians are always available by telephone in our offices for any details and information and to ensure the best after-sales service.

Only kits provided with the warranty coupon (duly filled in) contained in every set at the time of sale will be considered. IN CASE OF ACKNOWLEDGED MATERIAL OR WORKMANSHIP DEFECTS, THE FAULTY PART WILL BE PROMPTLY REPLACED.

## INFO ED AVVERTENZE

Seguire le seguenti istruzioni e informazioni, prima di effettuare il montaggio.

**A** Consigliamo innanzitutto di far eseguire il montaggio ad una officina specializzata ed attrezzata per il lavoro.

**B** Verificare la misurazione dell'altezza da terra prima di effettuare qualsiasi montaggio e dopo!

**C** Verificare, prima di smontare, il tipo esatto di veicolo con la relativa cilindrata, se poi benzina e diesel, l'anno di immatricolazione, il tipo di cerchi montati, il tipo di ammortizzatori installati, inoltre se il veicolo ha subito incidenti, il tipo di gomme montate, chilometraggio percorso, accessori installati quali ad esempio gancio di traino, pieno del serbatoio, ecc.

**D** Ricordiamo che l'abbassamento, il tipo di assetto e la funzionalità che si otterrà, dipendono anche dalle condizioni sopracitate.

**E** Normalmente l'abbassamento che si otterrà, può variare da 2 a 4 cm. max a seconda del modello e delle condizioni del punto C, in quanto gli studi e le prove di collaudo vengono eseguite sui veicoli nuovi e con dotazioni standard, qualora non si ottengessero tali risultati, consultare il distributore o il fabbricante. I valori di abbassamento sono ritenuti validi solo dopo diverse misurazioni effettuate dopo una certa percorrenza, affinché le molle si siano adattate nelle loro sedi.

**F** Le nostre molle di abbassamento sono compatibili con gli ammortizzatori originali installati quando ancora efficienti e tarati; qualora quest'ultimi non siano perfettamente efficienti si consiglia la sostituzione con ammortizzatori nuovi rinforzati, mentre il risultato ottimale si avrà con l'impiego degli ammortizzatori sportivi KGA.

**G** A montaggio effettuato è necessario rifare la convergenza e la campanatura delle ruote, inoltre nel caso che il veicolo sia munito di correttore di frenata, si dovrà controllare l'effetto ed eventualmente provvedere alla regolazione. Anche nel caso in cui il veicolo sia dotato di ABS, fare attenzione nel registrare in modo corretto i sensori a montaggio avvenuto.

**H** Per tutte queste ragioni si consiglia di affidarsi a personale specializzato ed attrezzato per questi impieghi, che fornirà altresì l'assistenza tecnica e l'informazione necessaria all'utilizzatore.

**I** Per molle speciali gruppo N, chiedere disponibilità modelli sterrato e asfalto.

**L** Si può verificare su alcuni modelli dove vengono montati ammortizzatori nuovi a gas, che non si ottenga l'abbassamento desiderato; in questo caso è consigliabile abbinare al KIT MOLLE il KIT AMMORTIZZATORI, oppure più semplicemente gli ammortizzatori della linea rinforzata.

**M** Per una corretta rilevazione della misura dell'altezza da terra del veicolo bisogna seguire sempre questo sistema (vedi pag. 5). Appoggiare il beccuccio del metro sul bordo inferiore del cerchio, passare con il metro al centro del mozzo ruota e leggere la misura in corrispondenza del bordo del passaruota.

**N** Per facilitare ai nostri tecnici una risposta concreta ad eventuali anomali abbassamenti, bisogna fornire le misurazioni precise (fatte come al punto C) per ogni ruota prima e dopo l'installazione, facendo attenzione di aver percorso con il nuovo assetto qualche chilometro per l'assestamento delle molle negli alloggiamenti.

## Info & warnings

Please follow these instructions and information before installation.

**A** First of all we recommend that installation is carried out by specialists with appropriate equipment.

**B** Check the height of the vehicle from the ground before and after any installation!

**C** Before dismantling, check exactly the car model and engine, including if petrol or Diesel, year of production, type of rims, type of shock absorbers installed, besides if the vehicle has been crashed, the kind of tyres, mileage, accessories installed such as tow hook, if tank is full, etc.

**D** Please note that lowering, the kind of ride and functionality also depend on the aforementioned conditions.

**E** A lowered ride usually varies from 2 to 4 cm (max.) according to the model and conditions described in C, as studies and testing are performed on new vehicles with standard accessories. If such results should not be achieved, please apply to the distributor or the manufacturer. Lowered measures are considered valid only after several measurements and after a certain mileage, once springs have settled in their seats.

**F** Our lowering springs are compatible with the original shock absorbers installed when they are efficient and calibrated. If the latter should not be perfectly efficient, we recommend to replace them with new reinforced OSRAV shock absorbers, while the best results are obtained by using KGA sport shock absorbers.

**G** After installation check camber and toe-in of wheels and in the event the vehicle is equipped with a brake regulation device, control braking efficiency and adjust, if necessary. If the vehicle is also equipped with ABS, make sure that all the sensors are correctly adjusted after installation.

**H** For all these reasons we recommend to apply to specialists provided with appropriate equipment for these operations who will also provide all the technical assistance and information you may need.

**I** In case of special group N springs, please ask for availability of offroad and tarmac models.

**L** It may occur on some models on which new gas shock absorbers are installed, that you do not reach the desired lowering; in this case it is advisable to combine the SPRING KIT with the SHOCK ABSORBER KIT or more simply OSRAV reinforced shock absorbers.

**M** For the correct assessment of the height of the vehicle from the ground, follow these instructions carefully (see pag 5): place the tip of the meter against the lower edge of the rim, pass through the centre of the wheel hub and read the measure at the edge of the wheelhouse.

**N** To help our technicians provide a practical response in case of abnormal lowering, please supply correct measures (see point C) for each wheel before and after installation and after driving the car with the new ride for a few Km so that the springs can settle in their seats.

### AVVERTENZA:

Fate attenzione nell'abbassamento sportivo dei veicoli equipaggiati con marmitta catalitica. Informare il proprietario del veicolo di avere avvertenza nella fase di sosta, data l'elevata temperatura del catalizzatore.

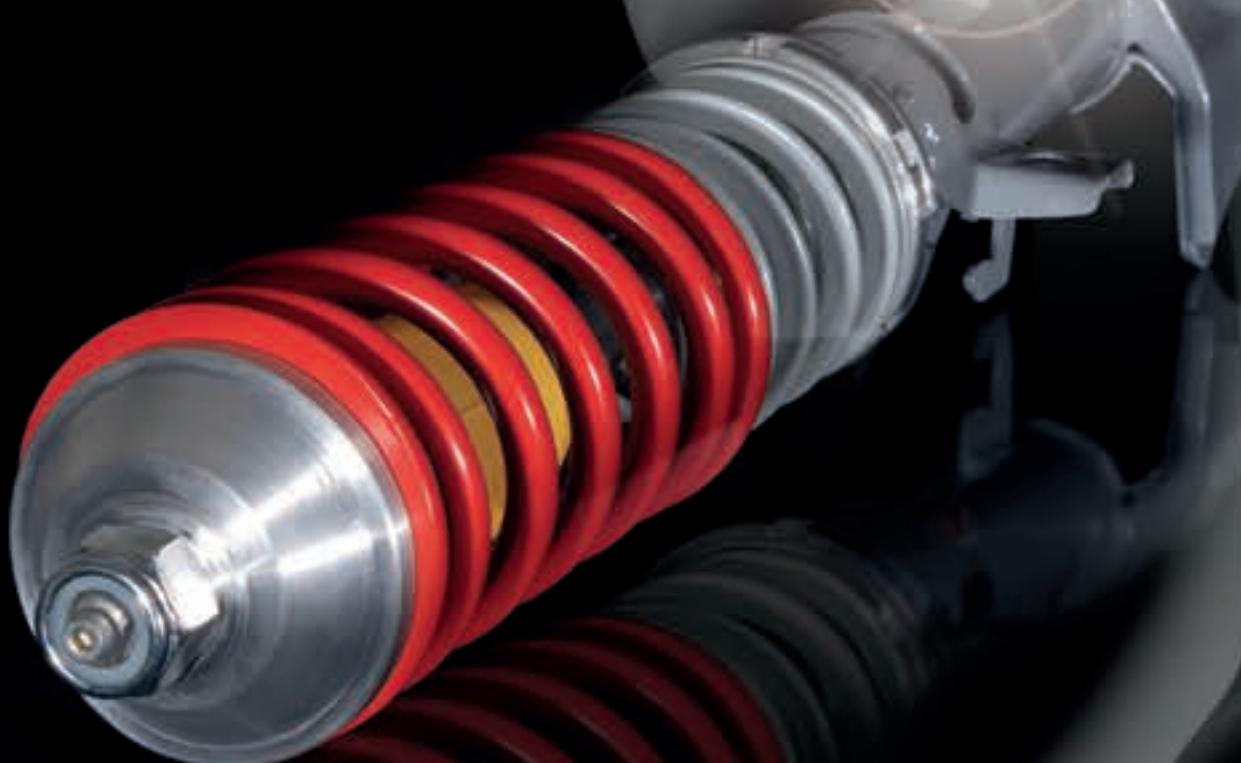

### WARNINGS:

In case of sports lowered ride on new vehicles with catalytic exhaust, inform the owner of the vehicle to take care in case of a halt because of the high temperature of the catalytic unit.
